Application No. 10/768,414 Amendment dated 02/04/2005 responding to Office Action dated 11/04/2004

AMENDMENTS

In the Claims

Please amend claims 1, 6, and 9 as indicated below. This listing of claims will replace all prior versions and listings of claims in the application.

Application No. 10/768,414
Amendment dated 02/04/2005 responding to Office Action dated 11/04/2004

5034393355

LISTING OF THE CLAIMS

| 1 | ♣ (Currently Amended) An apparatus comprising: |
|----|---|
| 2 | a housing having a distal edge and a proximal edge and a longitudinal exterior dimension |
| 3 | from the distal edge to the proximal edge; and |
| 4 | a exactly one tape retractably coilable within the housing and extending from the distal |
| 5 | edge of the housing, wherein the tape includes, |
| 6 | a distal end, |
| 7 | a first set of distance marks functionally identifying positions relative to the distal |
| 8 | end, and |
| 9 | a set of inside measure distance indicators each for indicating a distance from the |
| 10 | distal end of the tape to a corresponding distance mark plus the longitudinal exterior |
| 11 | dimension of the housing, |
| 12 | whereby the apparatus may be employed to perform an inside measurement |
| 13 | whose value is indicated by the tape. |
| 1 | 2. (Original) The apparatus of claim 1 wherein the tape further includes: |
| 2 | a set of outside measure distance indicators each for indicating a distance from the distal |
| 3 | end of the tape to a corresponding distance mark; |
| 4 | whereby the apparatus may be employed to perform an outside measurement whose value |
| 5 | is indicated by the tape. |
| 1 | 3. (Original) The apparatus of claim 1 wherein: |
| 2 | the first set of distance marks includes major marks and minor marks; and |
| 3 | the longitudinal exterior dimension of the housing is a whole multiple of a distance |
| 4 | between adjacent major marks. |
| 1 | 4. (Original) The apparatus of claim 1 further comprising: |
| 2 | an end piece coupled to the tape. |

Application No. 10/768,414 Amendment dated 02/04/2005 responding to Office Action dated 11/04/2004

5034393355

| 1 | 5. (Original) The apparatus of claim 4 wherein: |
|----|--|
| 2 | the end piece is coupled to the tape so as to have a predetermined distance of longitudinal |
| 3 | slop; |
| 4 | whereby the end piece can be used in making outside measurements and inside |
| 5 | measurements. |
| 1. | 6. (Currently Amended) The apparatus of claim 4 wherein: |
| 2 | the end piece is rigidly coupled to the tape and includes a portion which is perpendicular |
| 3 | to the tape for hooking over an end of an object to be outside measured; and |
| 4 | the tape further includes a second set of distance marks functionally identifying positions |
| 5 | relative to the a proximal face of the perpendicular portion of the end piece. |
| 1 | 7. (Original) The apparatus of claim 6 wherein the tape further includes: |
| 2 | a set of outside distance indicators each for indicating a distance from the perpendicular |
| 3 | portion of the end piece to a corresponding outside distance indicator. |
| 1 | 8. (Original) The apparatus of claim 1 wherein: |
| 2 | the first set of distance marks includes major marks and minor marks; and |
| 3 | the longitudinal dimension of the housing is not an integer multiple of a distance between |
| 4 | adjacent major marks. |
| 1 | 9. (Currently Amended) An improvement in a tape measure, the tape measure including a |
| 2 | housing having a longitudinal dimension from a distal edge to a proximal edge, and e exactly one |
| 3 | retractable tape having a distal end and bearing distance marks and distance indicators, wherein |
| 4 | the improvement comprises: |
| 5 | the distance indicators providing measurements from the distal end of the tape to the |
| 6 | proximal edge of the housing; |
| 7 | whereby inside measurements may be directly made with the improved tape measure |
| 8 | without a user having add in the distance of the longitudinal dimension. |

Application No. 10/768,414
Amendment dated 02/04/2005 responding to Office Action dated 11/04/2004

| 1 | 10. (Original) The improvement of claim 5 in the tape inclusive, wherein the improvement |
|----|--|
| 2 | further comprises: |
| 3 | separate distance marks and distance indicators for inside measurement and for outside |
| 4 | measurement. |
| 1 | 11. (Original) The improvement of claim 10 in the tape measure, wherein the improvement |
| 2 | further comprises: |
| 3 | an end piece rigidly coupled to the tape and including a perpendicular section; and |
| 4 | the inside measurement distance marks being offset along the tape from the outside |
| 5 | measurement distance marks by a distance corresponding to a thickness of the perpendicular |
| 6 | portion of the end piece. |
| 1 | 12. (Original) The improvement of claim 9 in the tape measure, wherein the improvement |
| 2 | further comprises: |
| 3 | an end piece slideably coupled to the tape; |
| 4 | the distance marks including major marks and minor marks; |
| 5 | the distance indicators comprising outside measurement distance indicators and inside |
| 6 | measurement distance indicators; and |
| 7 | the longitudinal dimension of the housing is an integer multiple of a distance between |
| 8 | adjacent major marks; |
| 9 | whereby the outside distance indicators and the inside distance indicators are enabled to |
| 10 | share the same set of distance marks. |
